

SUMMARY

Third-year B.Tech (Information Technology) student building applied machine learning and generative AI projects in Python, covering the full workflow from data preparation to model evaluation, with a growing focus on production-quality software engineering and algorithmic problem-solving.

TECHNICAL SKILLS

Languages: Python, C, C++

Machine Learning: Scikit-learn, Pandas, NumPy, Matplotlib — regression, classification, model evaluation

Generative AI: Prompt engineering and applied GenAI fundamentals

Core CS: Data Structures and Algorithms

Tools: Git, GitHub

EDUCATION

B.Tech in Information Technology

Government Women Engineering College, Ajmer

Current Year: 3rd | Expected Graduation: 2026

PROJECTS

Resume Screening and Job Matching System

- Built a system to screen resumes against job descriptions and rank candidate-role fit using NLP-based text matching on resume and job posting data.

CareerRadar

- Developed a career guidance and job-tracking tool to help users discover and monitor relevant opportunities based on their skills and interests.

PhishGuard (Web Security Project)

- Built a phishing detection system using a machine learning classifier to identify fake websites from URL and page features.

Crop Prediction System

- Built a Random Forest Classifier model to recommend the best crop to grow based on soil and weather data.

Credit Score Prediction

- Built a classification model to assess users' creditworthiness from financial and demographic data.

Insurance Cost Prediction

- Built a regression model to predict insurance charges from health and financial data.

Laptop Price Prediction

- Built a Linear Regression model to predict laptop prices from hardware specifications.

Bike Price Prediction

- Built a machine learning model to estimate resale prices of bikes from listing features such as age, mileage, and engine capacity.

ATM Simulation System

- Built an object-oriented Python simulation of core ATM functions, including withdrawal, deposit, balance check, and input validation.

BMI Calculator (Python)

- Built a console-based Python tool to calculate BMI and categorize users into fitness levels.

TRAININGS & CERTIFICATIONS

- Generative AI Training
- Data Science with AI and ML Training – Upflairs
- College-Provided Technical Training (2024)
